

iPad App - Smarthinking access via single sign-on

1. Log into Smarthinking through your D2L course. You will be prompted to generate a Token ID, if you like; you can skip this and select “ask me later.” If you choose to generate an ID, this ID will be used to activate access to your Smarthinking account on your iPad. Select *Generate Now*, if you want to proceed with set up for your iPad.

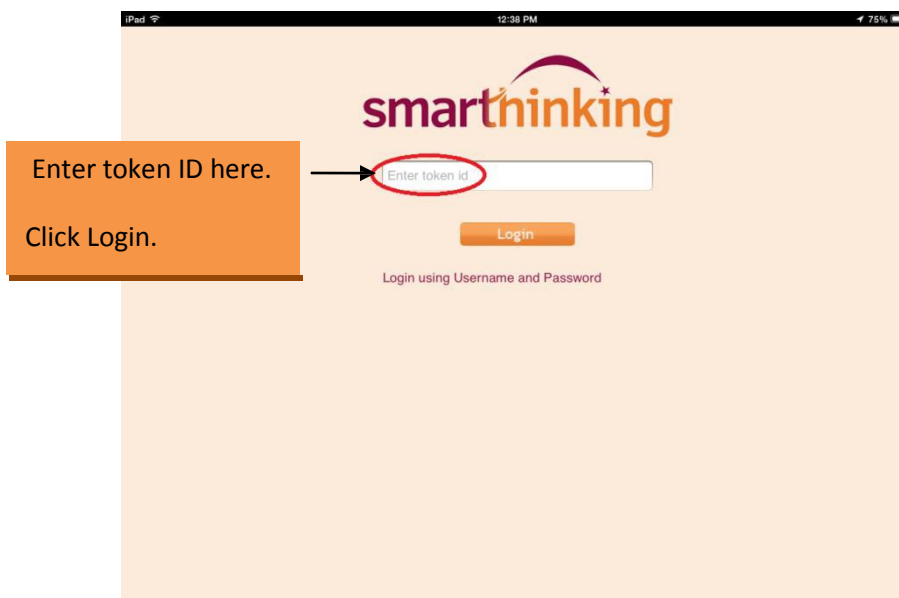

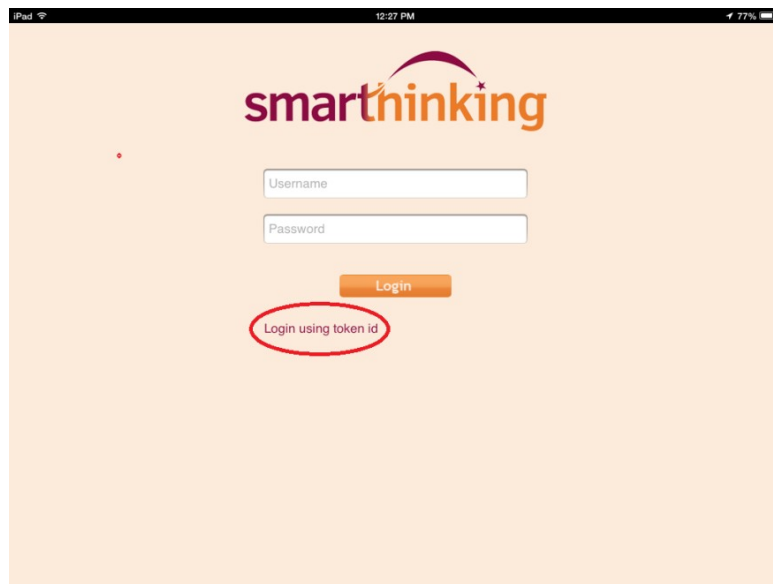

2. Once the token is generated, you will receive this screen. Write down your token ID.

3. There is a tab on the Smarthinking homepage titled “Smarthinking App” – click on it and follow the directions to download the Smarthinking app onto your iPad. This is a free app and can be downloaded from the App Store. Search for Smarthinking. There are two apps in the store; select the one with the logo below.

4. Once the app is downloaded, open it. You will be prompted to login. Note the link below the LOGIN button “Login using token id,” and click this link. You will then have the second login screen below.

5. Your iPad is now connected to your Smarthinking account. If you should remove the app from your iPad (or buy a new iPad and want to connect it), then return to your Smarthinking account via your computer through your D2L course and select the Smarthinking App tab at the top of your homepage. Then select My Token ID from the left menu. Your token ID will be displayed and you can use this ID to login on your iPad.
